

Task 1

1. **Actor** – Bakers, Administrator, Sales Staff, Confectioners, Retailers, Returning Customers, Customers.
Use Cases – Weekly Timetable, List of Bakery items for sale, Speciality Items, Phone Orders, Email Orders, Scheule order time (weekly. Daily), In shop orders, Retailers accounts, orders for products (eggs etc), Payment, Invoices, Items ordered, Allergen Information, speciality products (vegan etc)

Bakers and Confectioners – need to know their weekly timetable, list of Bakery items for sale and the speciality items.

Customers – need to know allergen information, how to make payment, phone orders, email orders, in shop orders.

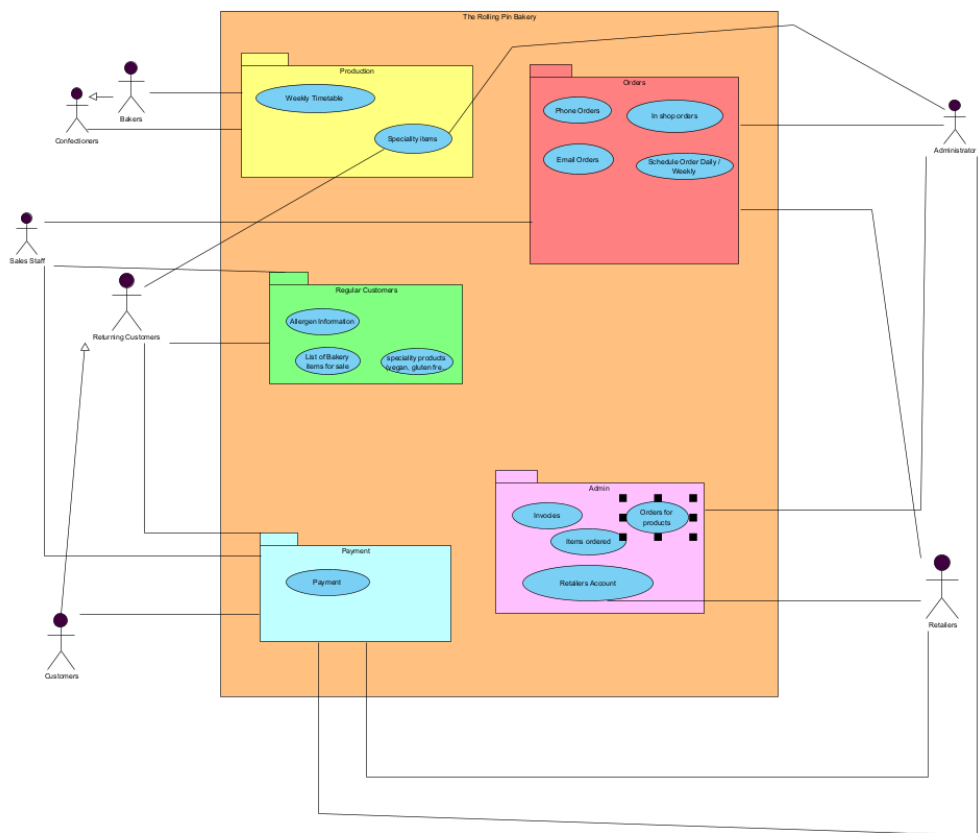

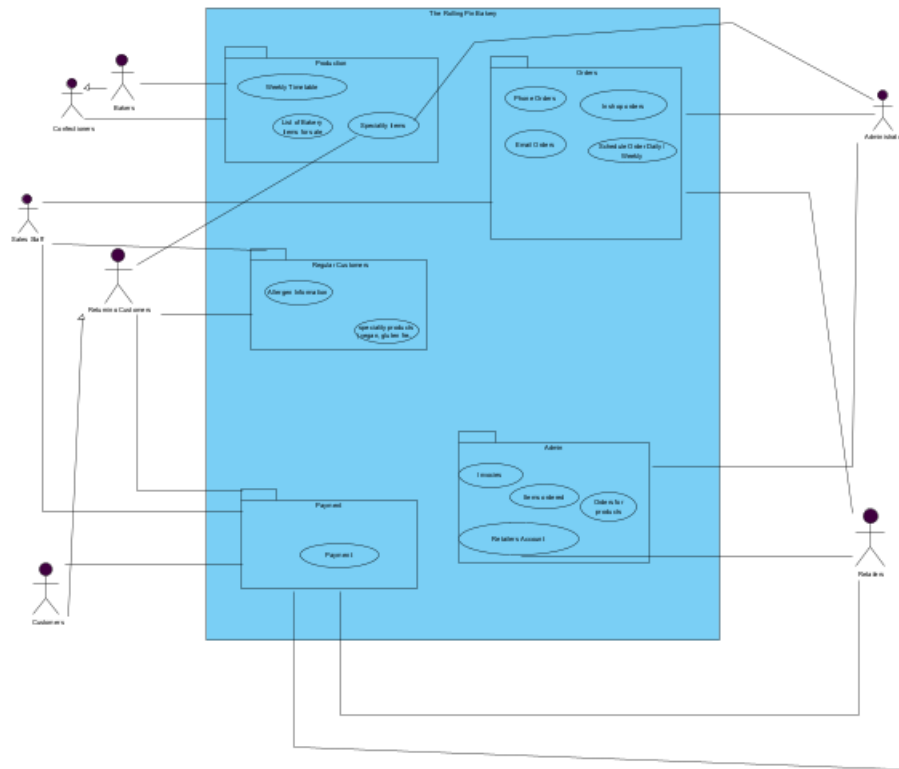

Returning Customers – need to know all that customers know and speciality items (Christmas cake) and speciality products (vegan, gluten free).

Sales Staff – need to know orders that need to be placed for products, items that have been ordered for stock, invoices, orders place (phone, email, in person) the schedule of the orders, Speciality items, allergy information, payments.

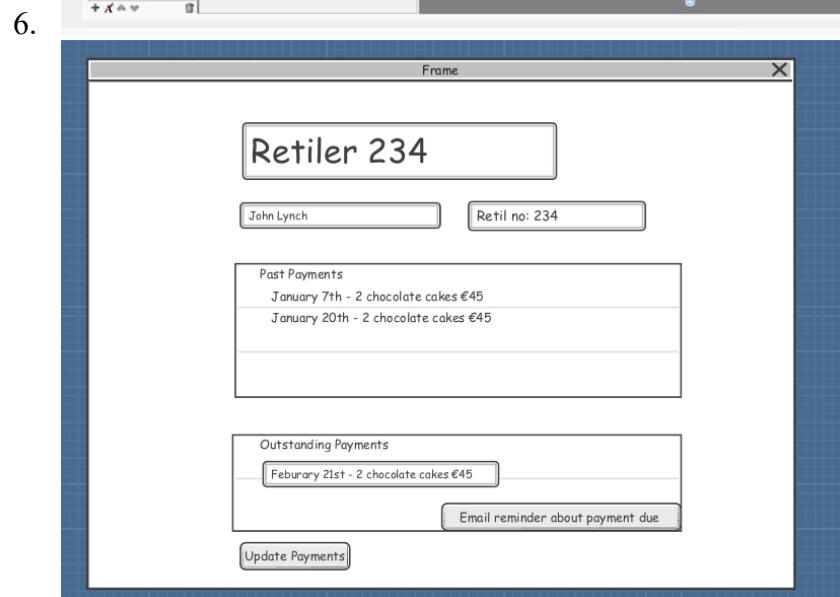

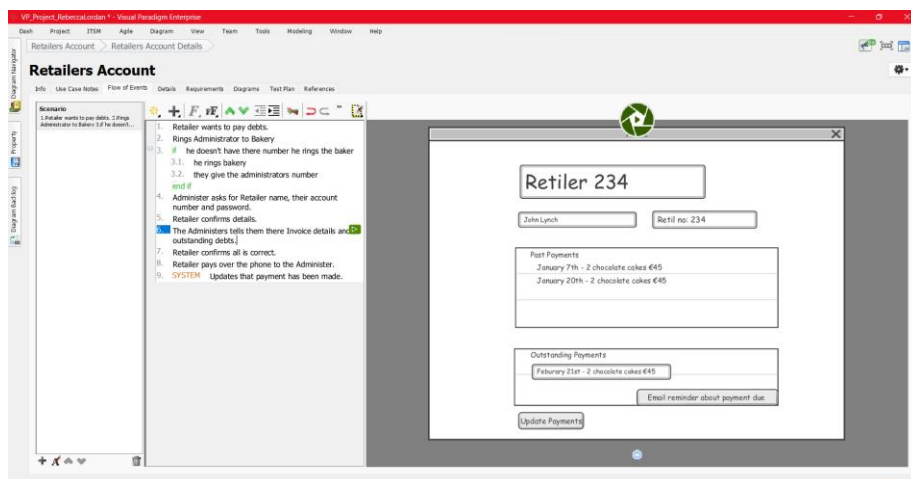

Administrators – Manage the retailers account, speciality items, update payment, update speciality product (vegan) manage orders placed

Retailors – Retailers account information, payment information, invoices.

2. .

3. 1) Orders are not written into the book straight away and because, so they are not sent to the central office until the end of the day which the people at the central office want to go home so they rush inputting the orders manually and this causes errors to happen.
- 2) Payment isn't taken at the time of order, so if its not collected the bakery won't get paid and will be at a loss as they have paid for the production and labour to make the product. If the regular customers got that option but new customers had to pay at time of order, an online payment system of sort would cut this down.
4. Pre and Post Conditions
 - Retailer Account, Retailer wants to pay his debts, so he rings the administration, they ask him for his details, name and retailer number, password, he confirms the outstanding payments, and he then pays over the phone. Must have already a retailers account.
 - Speciality items, returning customers, bakers and confectioners want to know what they can order or what they must be able to bake this week, so the Administrator will have to know what the special items are and update the list in time for this to work. So that the bakers know what they are supposed to be baking, and the returning customers know what is available for them to order.
- 5.

7. Non-Functional requirement - Can't have a retailer with 2 retailer numbers.
 - Orders that were made for products haven't arrived even though payment was made
