

Task 1

Create a new project file in VIP and name it as follows Lab03_Task1 and save it to your lab folder. In this project file, Create the following Use Case Diagram. Use the note icon in Use case diagram toolbox to write your name on the diagram. Copy diagram to clipboard as an image and paste it into your lab solution document. Save file.

Task 2

Create a new project file in VP and name it as follows Lab3_Task2 and save it to your lab folder. Carry out the Textual Analysis tutorial provided in the lab folder. The tutorial uses a text file “otv.txt” which is also provided. Create use case diagram. Copy your Use Case diagram to clipboard as an image and paste it into your lab solution. Save File.

Task 3

Create a new project file in VP and name it as follows Lab3_Task3 and save it to your lab folder.

1. Carry out textual analysis using the following problem statement and identify **actors** and **use cases** relevant to your identified actors.
2. Draw a Use case diagram illustrating actors and use cases identified in task 3. Create association relationships between actors and use cases to model goals different people playing a specific role have when interacting with the system. Include a system boundary.
3. Put your name on the use case diagram
4. Copy your Use Case diagram to clipboard as an image and paste it into your lab solution.
5. Save File.
