

Title: Review an existing System and create a prototype

Lab Number: Lab 1

Date of lab: 16<sup>th</sup> September 2024

Class: SD2-A

### Task 1.

1. Identify any two user roles for this system.

To find out what the weather is predicted to be.

To learn more about the weather

2. For each user role identify 2 features available.

The forecast page has a visual image of what the weather is predicted to be like today with temperatures and visuals. It also has a written description of what is predicted for today, tonight and tomorrow.

3. Consider the following two requirement scenarios described below. For each requirement, take a note of the following:

- a. Time it took you to complete the Search task.
- b. Number of steps needed to undertake the task.
- c. A description of any issues encountered.
- d. Rewrite requirements using a more generic formation [Who? What? Why?]  
“As a \_\_\_\_\_ I want to \_\_\_\_\_ so that \_\_\_\_\_”

### Requirement 1

Penny is a tillage farmer living in west Cork. She is planning on sowing seeds and would like to know if conditions are suitable for carry out this activity.

- a. One minute
- b. 2 - go to forecast, then to Munster and see what the weather is like for today and tomorrow
- c. Couldn't go directly to West Cork
- d. “As a user I want to input my exact location so that i get the most accurate results to plan my day as a farmer which heavily relies on weather conditions.”

## Requirement

Billy is a surfer who is planning on going to Donegal next weekend but there is a red alert for incoming storm. He wants to know what the difference is between the different alert categories.

- a. One minute
- b. 3 - Go to the forecast tab and select "Weather Warning & Advisories" this will show the current weather warnings and marine warnings but under a visual image of where the weather warnings are in place there is a "Warnings Explained" button, this will take you to a page that explains everything Billy needs to know about the different categories
- c. No issues, was clear and had simple language to explain and visuals to help.
- d. "As a user I want to know the difference in the weather alerts so that I don't endanger myself or others by not knowing how serious a red alert is."

## Task 2

1. A student on a particular computer science program needs to register for a mandatory elective module.

***"What information would be required to complete this task?"***

Student log in and password, the name of the elective module they want to take and the code of the module to register.

2. Consider the following scenario "Jenny Smith" is a student who has completed the first year of the evening higher certificate in software development. She is required to register for a mandatory elective module for semester 1 of second year.

***"What is the name, module code and CRN of this elective?"***

Object Oriented Principles, SOT7004, 4814

3. Sketch a navigation map to illustrate how information was found. You can do this using pen and paper and take a photo of it.
