

Training Session Booking

70% of Module Marks

Due: Phase 1 – submission on Canvas week 7 (25%)

: Phase 2 – submission on Canvas week 11 (35%)

: Presentation – week 12 (10%)

All submissions must be reviewed with your lecturer – no submission will be corrected unless it has been first reviewed.

Introduction

In this project, you will design and develop an interactive and responsive website allowing users to register for a training session.

Functional Requirements

An application user should be able to create/review/update and delete a booking for a training session. The user of the website should be able to book a training session, the details should include the name of the person, the ID of the person (10 characters) the date and time of the training session, and card details (card number, expiry, security code, etc.) for payment. Each booking should include the date it was created and must set the default to today's date.

Home Page

The initial page displayed on all accesses to the Web Site, The Home Page of the site. The Home should offer functionality in links to

- Create a new training session
- Delete a training session
- Modify a training session
- Report on training session: Report on the number of times a particular user attended the training sessions within a specific time (e.g., Oct 1st to December 15, etc.,).
- About Page
- Help page

A mongo database, as specified in your lectures, on the server should maintain all the details for the system

Phase 1 – submission on Canvas week 7 (25%)

In phase 1 the student will deliver a webserver running on the local machine which allows a user to create and display bookings on a browser. The data should be stored in a database.

Note:- only express modules which have been used in the lectures should be used in your assignment

Phase 2 – submission on Canvas week 11 (35%)

All of phase 1 should be delivered and the following functionality should also be added
The user should be able to:

Modify a training session by selecting from a list of training sessions

Create a summary report on training sessions for a user and display that report on the screen. The user should be asked to enter the name of the user and the dates which the report will cover. The report should include the name of the user and a list of all their training sessions.

The home page should also include a help and about button which redirects to the appropriate pages.

Note:- only express modules which have been used in the lectures should be used in your assignment

Note 2: A database should be used in all phases to manage data Submission of Assignment i

Submit all code for the project on Canvas in a zip file. To reduce the size of the zip file – delete the contents of the node_modules directory before zipping.

Note: Additional Details on Submission Requirements will be provided.

All submissions must be reviewed with your lecturer – no submission will be corrected unless it has been first reviewed.

Marking

Marks will be given for

- Well-constructed and readable code – note code cannot be well-constructed unless it is working (40%)
- Functionality (40%)
- Excellence of solution (20%)
